

PROJECT Tabei

6 sprints • 35 epics • 64 days • 6 locations

Junko Tabei

Japanese Mountaineer, Mother, & Leader • 1939-Present

On May 16, 1975 Junko Tabei clambered on battered hands and knees, covered with welts and bruises to become the **first woman to reach the summit of Mt. Everest**. Just twelve days earlier Tabei had narrowly escaped death after being knocked unconscious and buried alive by an avalanche. After being dug out by Sherpas, Tabei refused to give up and would not relinquish her role as the climb lead of her group. This determination allowed her to break through traditional boundaries and become a **mountaineering icon** in her native Japan and across the world.

In 1992 Tabei became the **first woman to complete the “Seven Summits”** by scaling the highest point of all seven continents. Her dream is to climb the highest mountain of every country in the world, having done so in 60 countries to date. Junko has created the **first women's mountaineering club** in Japan and **campaigns for sustainable mountaineering**.

PROJECT Tabei

35 Epics Committed • 8 Stretch Goals

EPICS

PLATFORM

Trusted Discovery

- More Efficient Reprocessing
- Data Quality Initiatives (Price Confidence)
- Flag Price Outliers
- Process Company Entity Type

Data Acquisition and Harvest

- Direct Source API into T1
- Redesign Harvest Engine to be More Robust
- Harvest 4 New Sources

Customer Success

- Onboard BOMs / BOM Parsing

Stretch Goals

- Create and Process Location Entity Types
- SLED - Prototype on Product Stack

Golden Data

- Network Score - Version 1 Formulas
- 44 Completed Part Classes with Normalization

Operations

- Rundeck Deployment for Foundation Data
- Chefize the Sync Server and BOM Support Server
- Formalize on Call, Incident Response Process and Write Run Books
- Security Program - Version 1

Performance and Scale

- Events bus - Version 1
- Curation Engine - Version 1

- Provenance API

PRODUCT

BOM Advantage 2.0

- Private Price Repository
- EMS Partner Comparison
- Improved Unit Cost Analysis
- Model Price
- Cost Comparison Widget
- Private Data Security

Customer Success

- Support Sales and Customers
- Refactor for Platform Stats / BOM Advantage 2.0
- Supplier / Manufacturer Stats
- Export Prospect BOM Stats to Excel
- Billing Statistics, Email Notification, Payment Portal

Stretch Goals

- Analysis of Cost over Time
- Modify Assembly Volumes
- Celery to Run on Multiple Boxes

Performance and Scale

- Move all Artifact Files to S3
- Paginate Project List Page
- Search / Sort Project List
- Optimize / Reduce Queries
- Get Parts Optimization

Design

- MLP for Sourcing Advantage
- Concept screens for Smart RFx
- Improved Navigation Model

- Design - Contextual User Assistance
- Design - Collaboration
